

hyCLEANER® repositions itself!

hyCLEANER® as a specialist for surface cleaning has attracted a lot of attention with its robot systems over the past years – not only in the solar industry but also in the field of cleaning façades and glass roofs.

The global efforts to achieve the set climate targets and the endeavor to sustain resources bear enormous changes - especially in energy generation. The scheduled cleaning of solar systems can make an important contribution to increasing yields and the associated optimal energy output.

Now is the right time for the **hyCLEANER®** team to invest and reposition for series production.

The company is strengthened by an experienced team. Celina Pfeiffer, Josha Kneiber and Michael Pfeiffer came on board in April 2022. With their experience in sales, marketing and the conversion from single-item to series production, they will complement the existing, highly motivated team.

They are clearly committed to today's location in Gronau, Germany, and will invest in its further development and expansion.

f.l.t.r. Josha Kneiber, Celina Pfeiffer, Andreas Grochowiak

Andreas Grochowiak, founder and developer of the technology, will continue to help steer the company's direction as Managing Director, thus ensuring the proven continuity. At the same time, the management team will be significantly broadened with Celina Pfeiffer and Josha Kneiber in order to successfully shape the further growth path together.

Alfons Thihatmer enters his well-deserved retirement for reasons of age, after having shaped the company's direction over many years and enriching it with his technical impulses.

The entire **hyCLEANER®** team is looking forward to the future and to the tasks that the **hyCLEANER®** will take on in the global industry.
